FLAGS

HOW TO PROTECT YOUR INVESTMENT

This leaflet explains how to look after your flag investment from protecting to maintaining to storing.

PROTECT

- Do not use your flag in winds over the recommended speed. Take it down and store away safely.
- Your flag is more vulnerable to breakage or damage in extreme weather conditions. Heavy rain allows less resistance due to the additional weight; protect it by taking it down.
- Over time your flag may discolour from air pollution; the bright whites will become more grey and the colours may dull a little. UV rays will cause deterioration and fading to the fabric and thread so we recommend keeping it out of direct sunlight for long periods of time.

MAINTAIN & REPAIR

- Your flag will last longer if cared for. Any edges that become frayed should be trimmed, reinforced and re-hemmed.

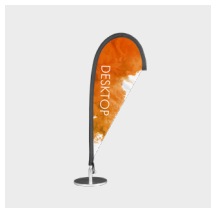

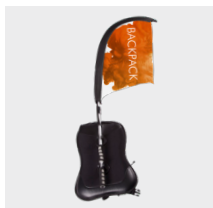

Explore our diverse range of indoor and outdoor flags...

- The life expectancy of a flag in "normal" conditions is 4-6 months.
- To keep your flag or banner in good condition make sure they're not rubbing on anything sharp which will wear them down quickly.
- Ensure you position your flag with enough space to rotate freely.

WASH & STORE

- Textile flags and banners can be washed on a maximum 40° wash with regular household detergents. This will remove the dirt and make them look bright again.
- Dry your flag completely before storing to prevent moulding.
- Store flags in a dry place and in poly bags to protect from dust and dirt.
